Building Your Own Local AI

Empower your organization's document search with AI

Ask anything about your accreditation documents, in everyday language. Every answer names **the file and the page it came from**, and you can open that document on the spot.

The problem

- Accreditation evidence is scattered across **thousands of files** on a shared drive: PDFs, Word, Excel, slides, even scanned pages.
- A single assessor question can take **half an hour** just to open the files one by one.

How it works

1. You type a question in **everyday language**.
2. The system finds the **most relevant** documents and summarises them for you.
3. It shows **evidence cards**: document name, page, and the quoted passage. One click opens or downloads the original.

What you get

Can I study AI and Machine Learning in the MTI programme?

Yes. The MTI curriculum includes a **Machine Learning & Deep Learning** course (IT240604, 4 credits), supported by Foundation of Data Science and Applied Data Science in the same track [1]. Its learning outcomes include designing solutions based on machine learning and deep learning [2].

1 **Kurikulum Prodi Magister Teknologi Informasi (MTI)** — Sheet: 9. Susunan Mata Kuliah

2 **Kurikulum Prodi Magister Teknologi Informasi (MTI)** — Sheet: 12. Pemetaan CPL-CPMK-MK

Example answer. Click an evidence card to open the original file.

Why you can trust the answers

- ✓ **Check it yourself.** Every sentence carries a source number, and the document opens right away.
- ✓ **No making things up.** Answers come only from the documents. If it isn't in the archive, the system says so.
- ✓ **Originals stay safe.** The system only reads files on the shared drive; it never changes them.
- ✓ **Data stays in the office.** Everything runs on the programme's own computer.

The technology behind it

The system uses **RAG** — *Retrieval-Augmented Generation*: the AI may only answer from the documents it finds. The AI model is interchangeable:

Local — Qwen3 8B on the programme's own computer; document text never leaves the office.

Cloud — ChatGPT, Gemini, or Claude, when you want sharper answers.

TRY IT NOW

https://akreditasi.ayolearn.stream

Scan the QR code, or type the address above

Username	`guest`
Password	`i am guest`

The guest account can ask questions and download cited documents.

Try asking

- Which courses are taught in the MTI programme?
- How many students and graduates does the programme have?
- List the lecturers' research publications from the last three years.

All three already have answers in the indexed archive.

Key Numbers

1,497	Documents indexed
188K	Searchable sentences
3.5M	Words inside

What it can read

PDF · Word · Excel · PowerPoint · Web pages · CSV · Text · Images & scans (OCR)

External sources can be added and indexed too, such as:

PDDikti · SINTA · Google Scholar · Campus website

Specs: Intel Core i7, 8 GB VGA, 32 GB RAM, 10 GB storage — **≈ IDR 20 million** per unit.
